# Who is Cleanflo Water Technologies

Cleanflo Water Technologies is a Canadian water system manufacturer specializing in:

- **Rainwater Harvesting**
- **Storm Water Management**
- **Grey Water Reuse**
- **Water Treatment**
- **De Watering Treatment**

We are a certified UL 508A Industrial Control Panel shop providing in house automation and control systems. Cleanflo Water Technologies Established in 2015 and is focused on sustainable water technologies.

Vancouver Main Office  
250 - 997 Seymour Street  
Vancouver, British Columbia, V6B 3M1  
TEL: 778 - 200 - 7356

Saskatchewan Main Office  
5 Commercial Drive, PO Box 128  
Craik, Saskatchewan, S0G 0V0  
TEL: 306 - 988 - 7909

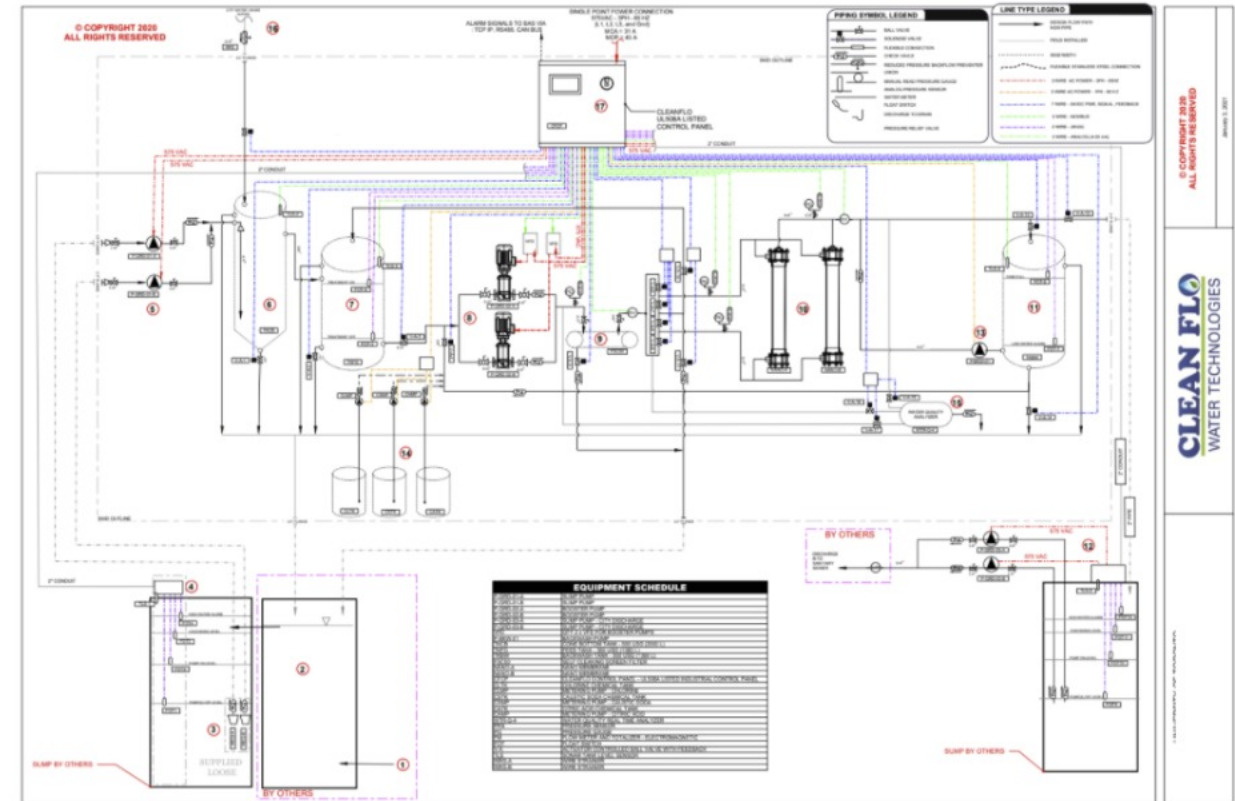

Toronto Main Office  
300 - 3660 Midland Avenue  
Toronto, Ontario, M1V 0B0  
TEL: 647 - 931 - 3356

# Services

We provide a full suit of services to support our systems including:

- **Manufacturing**
- **Alternative Solutions**
- **Design**
- **Engineering**
- **Consultation**
- **3D modeling**
- **Flow diagram and P&ID**
- **Written specifications**
- **Submittal packages**
- **Project Specification Review**

# Products

## Rainwater Harvesting

We focus on manufacturing water sustainable technologies. Cleanflo has become the leader in rainwater harvesting solutions and is at the head of the industry. All our systems are engineered to meet the Canadian Plumbing Code and CSA B805 Rainwater Harvesting Standard.

Our commercial rainwater harvesting systems are used across Canada to harvest, prefilter, store, pump and treat rainwater for a variety of uses including irrigation, toilet / urinal flushing, and fire suppression. We design and manufacture the most effective technologies to harvest the most important commodity to our survival - water.

We are a UL508A Industrial Panel Shop and provide in house automation allowing Cleanflo to offer custom design and build to meet existing specifications and provide cost effective alternative solutions.

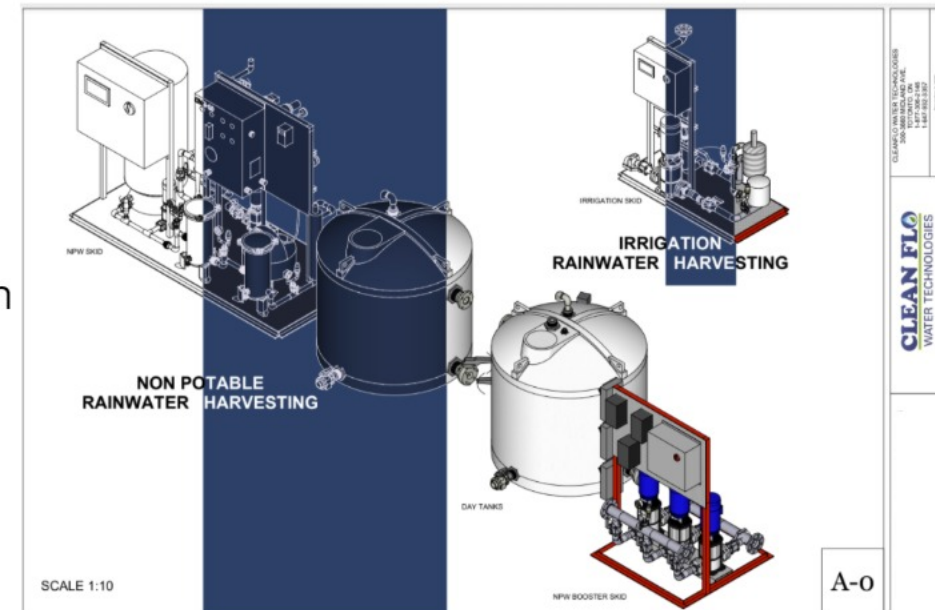

Contact Cleanflo and our engineering team will help determine a solution for your project.

**We KNOW water!**

“

Rainwater is fresh precipitation straight from the sky!

”

# Products

## Storm Water Management

Codes and regulations have changed to regulate and mandate storm water management systems causing an demand for efficient and effective storm water management systems. Now that storm water management is becoming a requirement Cleanflo has designed and manufactured technology to re-use storm water.

Our commercial storm water system are used across Canada to collect, store, pump and treat storm water for a variety of uses including irrigation, toilet / urinal flushing, and fire suppression.

We are a UL508A Industrial Panel Shop and provide in house automation allowing Cleanflo to offer custom design and build to meet existing specifications and provide cost effective alternative solutions.

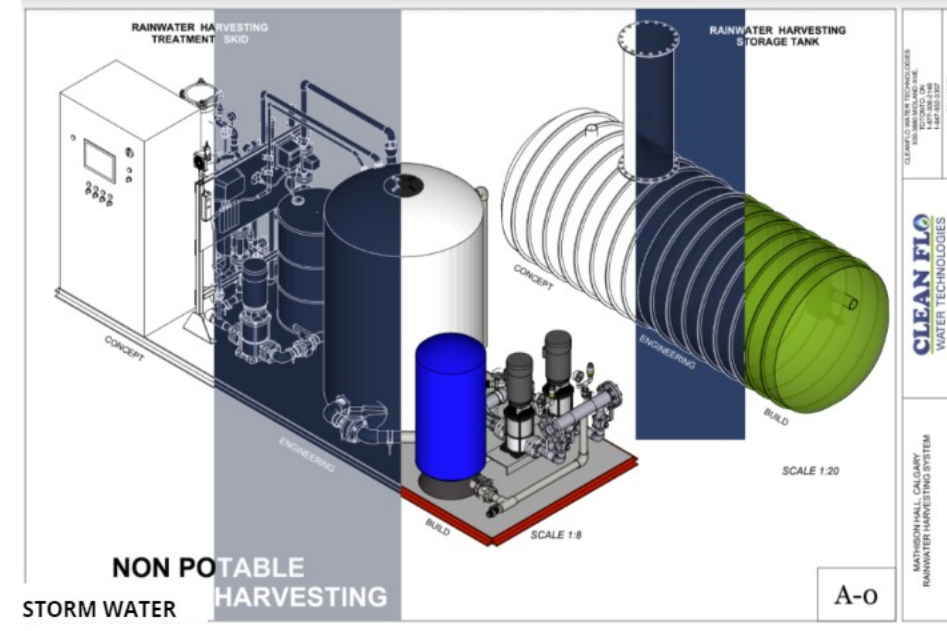

Contact Cleanflo and our engineering team will help determine a solution for your project.

**We KNOW water!**

“

Storm Water is rainwater that has contacted the ground surface

”

## Grey Water Reuse

Grey Water is once used water captured from shower, sink and laundry drains and reused for flushing toilets. Collecting and treating wastewater from commercial process is also an excellent way to apply this technology, reducing water consumption by thousands, sometimes millions of gallons per year. Grey Water is filled with contaminants, this is why our Grey Water reuse systems are custom designed and engineered to the specific reuse application.

Note: **Commercial process** may include, equipment washing, testing, mining/drilling and other applications that have a large demand for water and output of wastewater

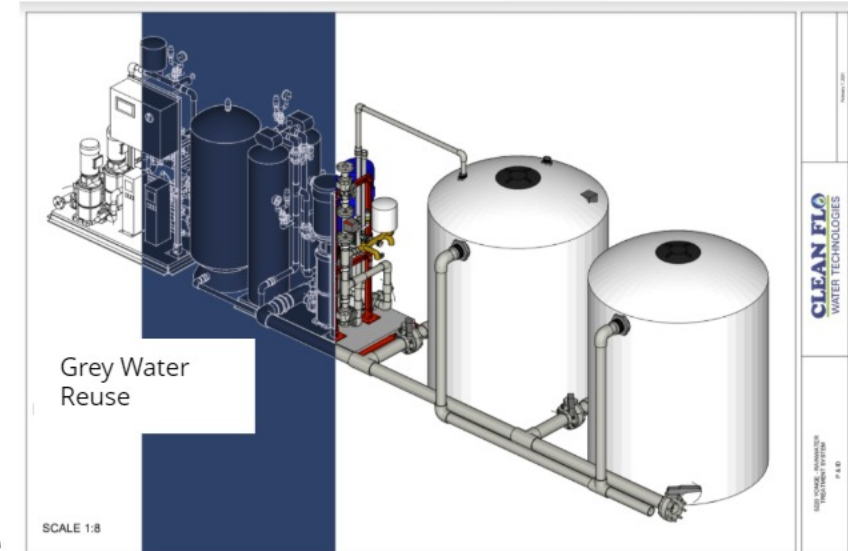

We are a UL508A Industrial Panel Shop and provide in house automation.

All of Cleanflo's Systems are designed and built to meet existing building and health code requirements. Using only the best products available and working with our clients, to meet specifications and provide alternate solutions under one roof. Cleanflo Water Technologies saves our clients money, time and delivers the highest quality product and service available.

**We KNOW water!**

Grey Water is once used water captured from sinks, showers, etc and dose not have fecal contamination

**Contact Cleanflo and our engineering team will help determine a solution for your project.**

## Water Treatment Systems

### Nano Filtration

Nano filtration is the process of removing very fine particles and some dissolved particles from water. The process is performed in a single step, requires no pre treatment and the entire process is chemical free. Cleanflo's Nano filtration skids will remove contaminants in waste water such as pesticides, pharmaceuticals, microplastics and color.

### Ultra filtration

Ultra filtration is the process of removing small particles, bacteria, and viruses from water. Most frequently seen as a pre treatment for RO Systems. Cleanflo's Ultra filtration skids can be used in Potable and waste water treatment applications.

We are a UL508A Industrial Panel Shop and provide in house automation allowing Cleanflo to offer custom design and build to meet existing specifications and provide cost effective alternative solutions.

**We Know Water!**

“

We can make your water potable or further purify domestic city water

”
